PROFESSIONAL SUMMARY

DevOps, Cloud, and Site Reliability focused Computer Science undergraduate (B.Tech, 2027) with hands-on Linux, networking, AWS/GCP cloud infrastructure, Terraform IaC, Docker/Kubernetes containerization, CI/CD, and incident-response foundations. Built Aegis, an evidence-first SRE copilot that detects, correlates, and investigates production incidents from real telemetry, plus a production-style CI/CD pipeline with automated testing, containerized deployment, and Prometheus/Grafana observability. Comfortable across the full incident lifecycle: detect, triage, mitigate, resolve, postmortem.

TECHNICAL SKILLS

Cloud & IaC: AWS (EC2, ECS, ALB, ECR, S3, IAM, VPC, CloudWatch, CloudTrail), GCP (Compute Engine, Cloud Run, Cloud Storage, IAM, VPC, Cloud Logging), Oracle Cloud, Render, Terraform (modules, remote state, GitHub OIDC)
Containers & CI/CD: Docker, Docker Compose, Kubernetes, Helm, multi-stage builds, Alpine images, non-root containers, image tagging & rollback, GitHub Actions, Git, GitHub, GitHub Encrypted Secrets, automated test gating, Trivy vulnerability scanning
Observability & Monitoring: Prometheus, Grafana, Loki, Promtail, structured/JSON logging, alerting rules, dashboards, latency percentiles (P50/P95/P99)
Incident Response & Reliability: Detection, correlation, and investigation workflows, runbook-driven triage, blameless postmortems, MTTR tracking, chaos injection testing, anomaly detection
Linux & Networking: Process management, systemd, journalctl, shell scripting, file systems, permissions, resource monitoring, TCP/IP, DNS, HTTP/HTTPS, ports & sockets, curl, traceroute, dig/nslookup
Programming, Backend & Databases: Python, Bash, C, C++, JavaScript (Node.js), SQL, FastAPI, Express, REST APIs, Jest, Supertest, MySQL, MongoDB, SQLite
Applied AI/ML & Data: PyTorch, NumPy, Pandas, Scikit-learn, RAG, vector embeddings, NLP, semantic search, Ollama, OpenAI Whisper, CUDA/GPU acceleration, Matplotlib, Microsoft Excel, FFmpeg

PROJECTS

Aegis: Evidence-First SRE Copilot github.com/underratedgitter

Python, FastAPI, Docker Compose, Prometheus, Grafana, Loki, Promtail, SQLite

- Built a full observability and incident-response stack (Prometheus, Grafana, Loki, Promtail via Docker Compose) monitoring a checkout-and-inventory microservice pair instrumented with Prometheus metrics and JSON logs.
- Engineered a detection-and-correlation engine pairing threshold alerts with a rolling z-score anomaly detector, merging related checkout/inventory signals into one root-caused incident instead of duplicate alerts.
- Developed an evidence-citing investigator with four read-only tools (metrics, logs, runbooks, incident timeline) assembling auditable evidence before proposing a remediation, behind a human-approval safety gate: every fix is a bounded, allowlisted action (clear fault / adjust replica count) requiring a named approver and a second API call, with no shell, Docker socket, or arbitrary command access.
- Added loaded chaos injection (latency, 5xx errors, dependency failure, CPU stress) to validate detection and MTTR end to end, with incident history and MTTR calculation persisted in SQLite.

CI/CD Pipeline Automation with Docker & Cloud Deployment github.com/underratedgitter

Node.js, Express, Jest, Supertest, Docker, Kubernetes, Helm, GitHub Actions, Prometheus, Grafana, Render

- Engineered a 4-stage GitHub Actions pipeline (Test, Security Audit, Build & Push, Deploy) gated on Jest/Supertest suites passing and Trivy scanning of both the Helm chart config and the built image, shipping code to a Kubernetes cluster via atomic Helm upgrades with automated Helm tests, alongside a Render deploy hook, in under 5 minutes.
- Containerized a Node.js/Express REST API with a multi-stage Alpine Dockerfile (non-root user, layer caching) for a minimal, secure image; tagged images with commit SHA for full rollback traceability; eliminated hardcoded credentials by routing Docker Hub and deploy-hook auth through GitHub Encrypted Secrets.
- Instrumented the app with Prometheus metrics and a Grafana dashboard covering throughput, P50/P95/P99 latency, memory/CPU, and event-loop health, backed by 5 alert rules (app down, error rate, P99 latency, heap usage, event-loop lag).

Terraform AWS ECS Platform github.com/underratedgitter

Terraform, AWS (ECS, ALB, ECR, VPC, CloudWatch), GitHub OIDC

- Architected a multi-module Terraform platform (network, ECS cluster, service) provisioning an ECS-on-EC2 cluster, an ALB across 2 availability zones, an ECR repository with image scanning, and CloudWatch alarms, with S3 + DynamoDB-locked remote state.
- Eliminated long-lived AWS credentials by wiring GitHub Actions to assume a repo-scoped IAM role via OIDC; enforced IMDSv2, least-privilege IAM policies, and Session Manager access (no SSH) as the default security posture.

RAG-Based AI Teaching Assistant github.com/underratedgitter

Python, PyTorch, Ollama, NumPy, Pandas, Scikit-learn, FFmpeg

- Built an end-to-end RAG assistant turning video lectures into an interactive Q&A system (speech transcription, vector embeddings, timestamp-based retrieval), cutting processing time from 5 minutes (CPU) to 20 seconds (GPU) — a 15x speedup — via parallel processing, batch chunking, and pipeline optimization, achieving sub-second semantic search across 1,000+ text chunks.

EXPERIENCE & LEADERSHIP

Software & Solutions Architect Intern Aug 2026 – Present
D-Tech Solution Integrators Bharuch, India

- Built an organisation dashboard using the Odoo API.
- Building the company's Odoo website with a connected e-commerce store.

Cloud Event Manager Aug 2023 – Jan 2024
Google Developer Student Club (GDSC), P.P. Savani University (PPSU) Surat, India

- Facilitated 25+ hands-on cloud labs and 40 coding sessions, mentoring a 12-member team in building and deploying 8 applications on Google Cloud Platform (GCP).
- Led cloud-focused technical initiatives that helped the college achieve the top position among institutions in South Gujarat.

Open Source Contributor – Bindu (Open Source Project) Feb 2026

- Replaced generic *Exception* catches with specific exception types to improve Python error handling; clarified setup docs for Hindi-speaking users (API key configuration, free OpenRouter model options).

CERTIFICATIONS & TRAINING

AWS Cloud Foundations (Amazon Web Services, May 2026) | **Machine Learning for Data Science Projects** (IBM, Sep 2025) | **Android App Development** (Vanderbilt University, Mar 2025) | **Data Analytics & Visualization Virtual Job Simulation** (Accenture North America / Forage, Oct 2023; analyzed 7 datasets, Excel, Matplotlib) | All credentials

EDUCATION

Bachelor of Technology in Computer Science and Engineering, P.P. Savani University, Surat, India Jul 2023 – Jun 2027
